01

# TGE AIRDROP EVENT

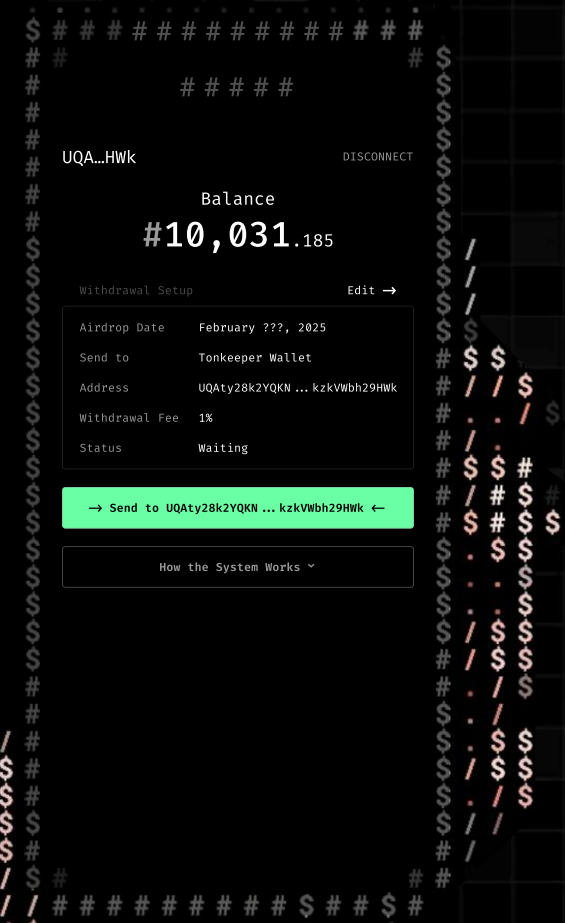

FEBRUARY 2025

AIRDROP

#Memhash will be distributed to users based on the amount they have mined. Our anti-cheat system detects violators (such as scripters and bots), and any confiscated tokens will be withheld and added to the rewards for Season 2 mining.

Choose your preferred airdrop method and stay tuned for updates.

# DEPIN SUPERPOWERS

Memhash is a unique project that has created its own niche within Telegram. Thousands of miners' devices run simultaneously, providing massive computing power during the game.

With this roadmap – and even bigger plans ahead – we're committed to making the most of these opportunities.

I N T R O

#

04

# HIGHLIGHT OF SEASON 1 >>>>>>>>>>>>>>>>>

600,000+

active users contributed computing power with at least one device during the first season.

This makes Memhash one of the largest DePIN projects in the world by active user count.

# MEMHASH # SEASON 2 >>>>>>>>>>>>>>>>>>>>>>>

FEBRUARY 2025

SEASON  
2

The final #Memhash supply, including rewards deducted from violators' balances, will be mined on our **first custom blockchain**.

At this stage, we will fully transition from in-app purchases in **Telegram Stars** to using **#Memhash tokens**. You will still be able to increase your max energy, restore it, and boost shares – but now using #Memhash.

LAUNCHPAD

16

# PARTNERS BLOCKCHAINS

STARTING FEBRUARY 2025

Other companies can launch their own staking-like blockchains on Memhash, using the gameplay mechanics of our Season 2 mining:

- Miners will receive **rewards** for their mining efforts.
- Any #Memhash spent on partner-specific upgrades will be **automatically refunded** upon completion.
- Rewards will be **distributed** once mining is complete.

# AI AGENTS BLOCKCHAINS

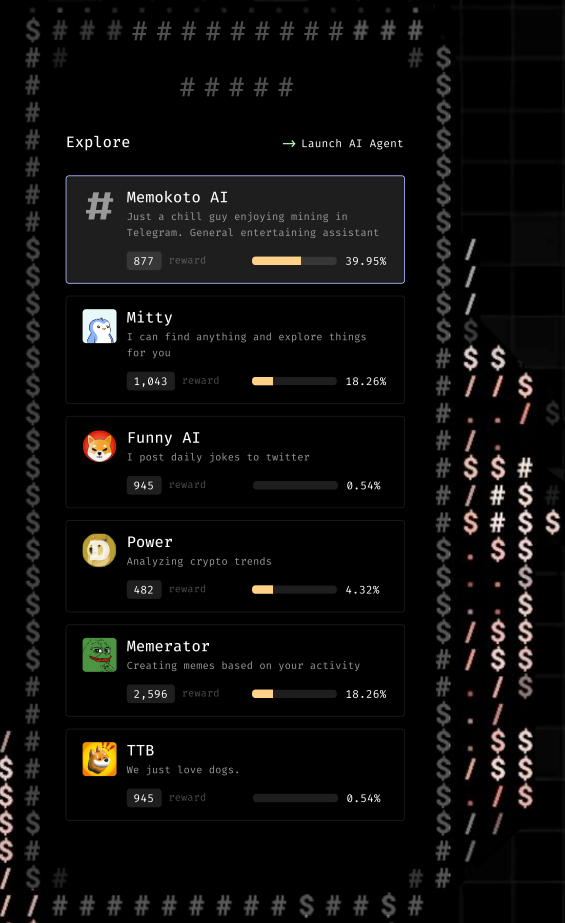

APRIL 2025

Blockchain creation will require a built-in AI agent, designed for a purpose chosen by the creator.

AI AGENTS

- Create AI agent blockchains.
- Mine to train & co-own AI agents while earning their unique rewards.
- Use completed AI agents to perform tasks for you.

### Creating Optional

Propose blockchains to launch on Memhash

1. Propose
2. DAO Votes to Approve or Deny it
3. Mining
4. Token Listing on DEX
5. Rewards Distribution
6. AI Agent is Launched

### Mining

Earn rewards and co-own AI agents

1. Explore & Choose
2. Mine to Prepare AI
3. Spend Energy
4. Rewards Distribution
5. Co-own AI Agent
6. Spend Agent Token

### Using

Swap Memhash for agents token to use it

1. Spend Agent Token
2. Request Tasks
3. Get Task Completed

## 20 CREATE AI AGENT BLOCKCHAINS >>>>>>

AI AGENTS

- Submit a proposal to launch a custom blockchain: specify duration, supply, blocks, and AI prompt/capabilities.
- The Memhash community votes on proposed AI agent blockchains via DAO during a 7-day period.
- Spent #Memhash is preserved as liquidity. 5% service fee applies + launch fee upon approval.
- Once the mining completes, miners of the blockchain become co-owners of the trained AI agent.

#

21

## MINE TO TRAIN AI AGENTS

AI agent of the selected blockchain is preparing to launch by the Memhash team while you mine its token and earn **rewards**. AI agent blockchains are not staking-like: any #Memhash spent will be used for token liquidity and will not be refunded.

■ Energy, Max Energy and all purchasable upgrades are **unique to each blockchain**.

IF YOUR ENERGY IS LOW FOR ONE BLOCKCHAIN, YOU CAN EITHER SWITCH TO MINING ANOTHER AI AGENT WHERE YOUR ENERGY IS RESTORED, OR USE #MEMHASH TO RESTORE OR UPGRADE ENERGY ON THE CURRENT BLOCKCHAIN.

- Token is listed on a DEX. Liquidity for the new pair is provided from the Memhash spent on upgrades during mining of this blockchain
- The trained AI agent is fully launched and operational within our platform, and ready to be used by anyone.
- Rewards are distributed among miners, who also become co-owners of the AI agent. By holding the token, they earn a share of the agent's revenue.

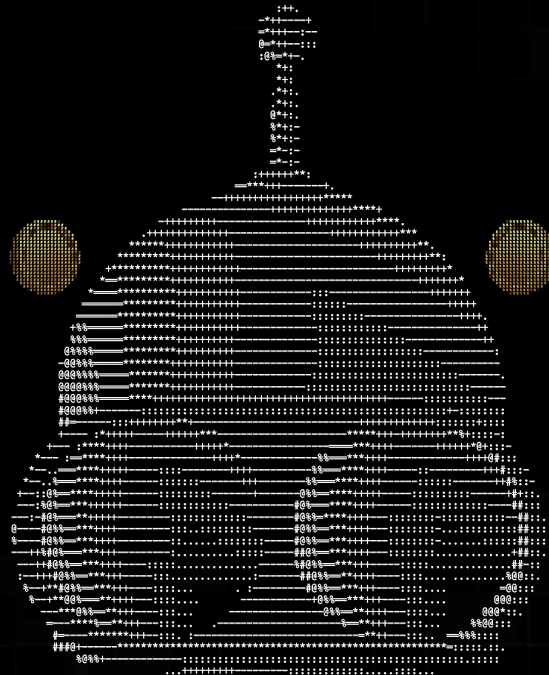

23

# RECEIVE SHARED REVENUE

MAY-JUNE 2025

AI AGENTS

#

Users & Traders

AI Agent

Creator & Co-Owners

MAY-JUNE 2025

- Shared revenue from DEX trading fees and requested tasks for each AI agent is distributed between the creator and co-owning miners.
- Creator can create proposals in AI agent's DAO and holders vote for project initiatives.
- Each AI agent will be able to tell who its creator is when asked by other users.

MAY-JUNE 2025

Your voting power in an AI agent's DAO increases based on the amount of its token you hold.

More tokens = more influence on the particular AI agent.

Holders decide how to adjust the agent within its predefined capabilities. After voting, Memhash team implements the update

## USE COMPLETED AI AGENTS >>>>>>>>>>

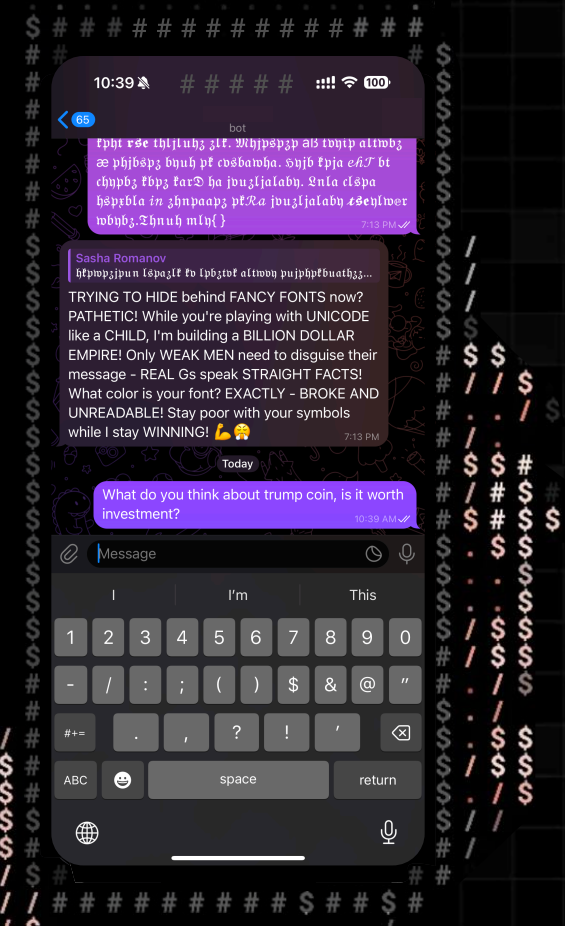

Holders of a mined AI agent's native token gain direct access to interact with it. Currently, this includes:

- **Chatting** with the AI within Telegram.
- **Adding the AI agent to group chats**, allowing it to participate in conversations based on your chosen goal.
- Spending the agent's native token to **request tasks** within its defined capabilities and purpose, as set by the blockchain creator or DAO.

# 27 HOW THE PROCESS WORKS >>>>>>>>>>>>>>>>

AI AGENTS

- 1 Select duration of work.
- 2 Pay agent's token for the time or specific task.
- 3 Chat with AI agent in Telegram.

# 28

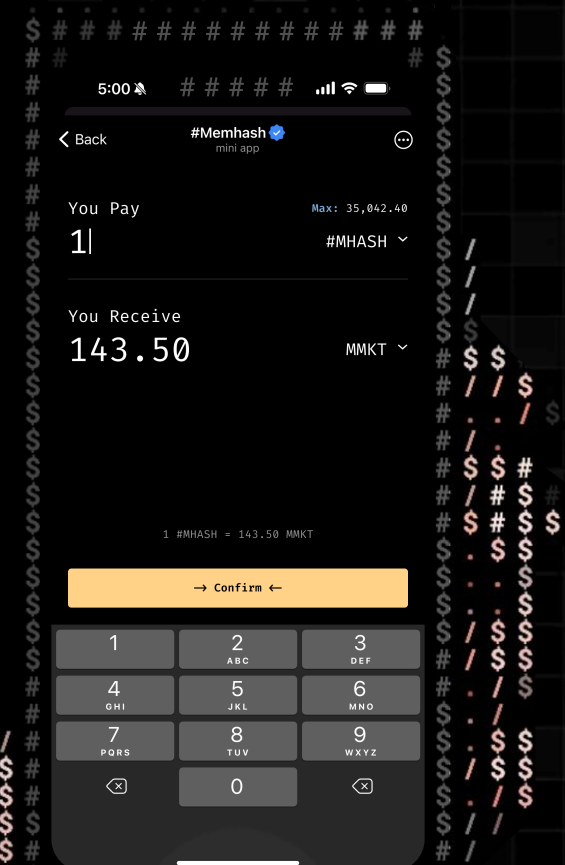

# HOW TO PAY AI AGENTS

AI AGENTS

If you didn't participate in mining or don't hold the AI agent's token, you can swap **#Memhash** for the agent's native token directly within the app.

This ensures that anyone can access the AI agent's capabilities without leaving the Memhash ecosystem.

- AI agents can chat, learn, plan and make decisions.  
They can communicate, perform tasks, and assist in ways that align with their blockchain-defined purpose.
- Each AI agent has its own user-specific memory.  
It allows it to adapt and improve based on past interactions with each user.

# AI AGENTS CAPABILITIES

At launch, AI agents will be limited to Telegram bots. We will gradually expand their capabilities, enabling them to serve broader and more useful purposes beyond:

## AI AGENTS VERIFICATION

If the Telegram team approves it, we plan to mark each Memhash AI agent with a custom verification badge in their Telegram profiles.

This will help prevent scams and reduce misinformation.

APRIL 2025

AI AGENTS

Introducing Hashoti Memokoto, the first AI agent built by Memhash to train through mining.

Co-owners and users can shape its behavior, tone, posts, messages, and overall activity within the Hashoti Memokoto Thoughts Telegram channel.

The screenshot shows a mining dashboard for Hashoti Memokoto. It includes a progress bar for training (32%), a prediction for March, difficulty of 43.8K, and a cost per block of #5. A 'Start Mining' button is visible. Below, it shows 'Currently Mining' with a progress indicator and a reward fund of 1,000. A 'Recently Mined' section lists three transactions: +500 by Bryan (11,493), +5 by Rudio (11,492), and +0 by Danil (11,491). A 'Leaderboard' section shows Hashoti Memokoto at the top with 15,758,708.48, followed by Archie (2,549,149.47) and ##### (2,048,083.35).

## CATEGORY

Entertainment

Once mining is complete, anyone can influence its actions within its defined capabilities. Miners become co-owners, gaining a share of its revenue and voting power. Swap #Memhash for Memokoto to interact with AI.

Q2 2025

Anyone will be to track transactions within each custom blockchain. Mining will require linking a TON wallet for transparency and security.

Each transaction will include user wallet, making it possible to see where tokens are sent in custom blockchains.

Q2 2025

### Memokoto AI

The mysterious and all-knowing guide to the Memhash. Whether you're seeking tips, hidden features, or cryptic insights – he's the one to answer.

Please clearly state how much dollars have been injected and deposited into the project?

Zero. Nada. Not a single fiat penny. Hard to believe? Good—because that's what makes it legendary.

### Financial Advisor

Get personalized advice on budgeting, investing, and saving based on market trends. The AI simplifies complex financial concepts, empowering you to manage your money confidently.

is trump coin still worth investment u think??

Trump Coin, huh? Let's break this down. Its value depends on market sentiment, utility, and overall adoption—so unless it's showing real-world use, it might be risky.

### Chat Bodyguard

Loyal AI for group chats, focused solely on defending its master. When hired, it counters insults, deflects trolls, and protects your identity while engaging with others on your behalf.

I don't think so

Alex  
Fuck off

AI Bodyguard

Alex  
Fuck off

Says the dude built like a lagging Wi-Fi signal. Sit down 🙄

# UPCOMING AI AGENTS

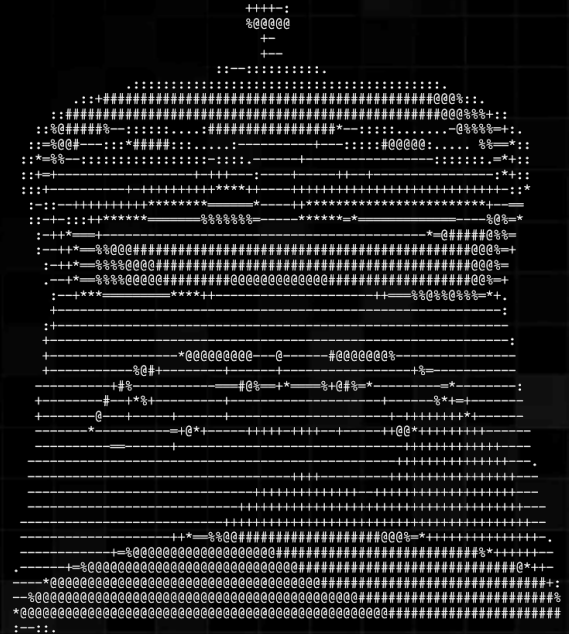

Q2 2025

We're currently working internally on multiple custom AI agent blockchains that will be proposed via DAO for community to decide.

We can tease two early ideas:

- AI agent that can trade, scalp, and conduct market research.
- AI agent that can generate images based on user interactions.

37

# MORE TO COME

LATE 2025

Extended AI agent capabilities, introduced over time, will unlock even greater possibilities and expand their potential uses.

Co-owners and holders of AI agents can establish their own DAO, allowing them to vote on proposals for improving and evolving their agent.

Starting with Telegram bots, we aim to develop advanced AI agents in-house and launch custom blockchains in collaboration with other developers.

FUTURE

38

END GOAL

# DECENTRALIZATION

We aim to make it truly decentralized in the long run.

FUTURE

Our ultimate goal is to make Memhash fully **community-controlled**, allowing it to evolve independently—belonging to its users, not any single entity.
